

## WORKSHOPS AT SCHOOLS

National workshops have now been successfully delivered in each partner country! In every location, teachers led an engaging theory session, covering helmet use, road signs, and safe riding techniques, before taking students outside for hands-on practice. During recess or scheduled outdoor slots, children mounted their bikes and scooters to navigate a guided obstacle course laid out on the playground floor.

## WORK PACKAGE N°4 - TRAINING FOR TEACHERS AND ROAD SAFETY CAMPAIGN

From mock pedestrian crossings to painted “roundabouts” and traffic-light simulations, students tackled each challenge under instructor guidance, reinforcing real-world road-safety skills through play. This combined approach (presentation followed by practical drills) has made learning both memorable and directly applicable, setting the stage for safer journeys on two wheels.
